Trans. of Khim[icheskie] Volokna (USSR) 1961,

DESCRIPTORS: *Viscose, Iron, Sulfides, Cellulose.
Surface-active substances, Amines,

The presence of dispersed air in viscose decreases its transparency. Dissolved air does not influence viscose transparency. A decrease in viscose transparency in the process of ripening is due to the presence of Fe in it which is gradually converted into sulfide. The presence of Ca also decreases the transparency, especially when it is introduced into the dissolving pulp. (Materials--Textiles, TT, v. 10, no. 9) (over)
